

# BUCKLEY Fence, LLC

Where innovation and design make the perfect fencing system.

## ALUMASHIELD FENCE

Alumashield Fence is designed to be the permanent fencing solution for the ranch or farm. It is a superior alternative to wood, vinyl or steel pipe. Offered in a glossy white or black finish and in any rail configuration, the Alumashield Fence product line includes the matching Alumashield Gate and Buckley Latch (see reverse for gate and latch information).

**Strong and Durable.** The first pipe fence made of aluminum alloy, the Alumashield Fence is composed of 2 3/8" aluminum alloy tubing reinforced by a high strength cold-rolled steel tubing core sealed in at each end. This composite construction gives the rails more strength than steel pipe alone and enables significantly more flex for improved horse safety. The fence components are protected with an architectural grade powder coating in combination with a chromate conversion coating for superior paint adhesion. Unlike galvanized, powder coated steel pipe fence, this fence will never rust!

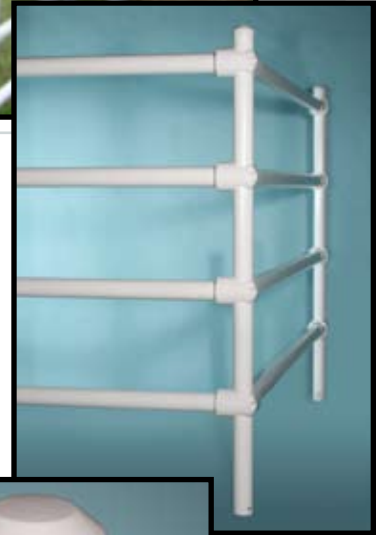

**Long Lasting and Maintenance Free.** The expected lifetime of the Alumashield Fence is 50 plus years and the lifetime maintenance costs are virtually zero. The rails will not rust, break, warp, or sag. The protective coating will not chip or peel and has superior long-term resistance to fading or chalking. And aluminum, like steel, is not palatable to horses and will not be destroyed from cribbing. Truly a permanent fence that will always look great!

**Clever Design.** The patented rail connectors are made of aluminum alloy and are fitted with rubber grommets to protect the rails' coating. Each connector has a single set screw made of forged aluminum alloy fitted with a rubber grommet at its base. The rubber grommets allow the rails to be articulated easily to fit any terrain and insure the protective coating is never compromised during installation.

**Easy Installation.** No welding or numerous fasteners. Once the posts are set correctly, the rail connectors simply slip on the posts and are easily fastened at each intersection with the quick turn of just one set screw. For detailed installation instructions and layout dimensions, see our website at [www.BuckleyFence.com](http://www.BuckleyFence.com).

**Designed For Horse Safety.** The Alumashield Fence is highly visible and has smooth, rounded components. The rails flex will serve to cushion the horse upon impact and will spring back to a perfectly straight line. The rails will not break and cause splintering or shards, and there are no protruding nails or screws. The horse is safely contained within the fence boundaries without escape or injury.

**Eco-Friendly.** Every single component of the Alumashield Fence is 100% recyclable. When it finally reaches the end of its very long and useful life, it will remain a valuable commodity as scrap metal that can be recycled to make new metal products with the same properties. It will not end up as waste for the landfill!

## ALUMASHIELD GATE

The Alumashield Gate is designed to match the Alumashield Fence and can also be used with any existing wood or vinyl fence. It is constructed of heavy-walled Aluminum alloy tubing and is uniquely designed without the need for external hinges.

Instead the post end of the gate has a built-in dual (upper and lower) bearing system that serves as the gate pivot. The bearing system has a built-in leveling mechanism. The upper internal bearing assembly simply rests on top of the gate post. The lower internal bearing has an eccentric feature that when rotated levels the gate, which can be done after the gate post is installed. The bearings allow the gate to open and close easily and quietly and to be perfectly level at all times.

Offered in three (3) and four (4) rail designs, the Alumashield Gate comes in four different sizes: 4, 6, 8 and 12 feet, and in a glossy white or black finish.

## GATE LATCHES

We offer two different latch styles for your gate, the Buckley Latch and the EZLatch. Both are made of corrosion resistant aluminum alloy with stainless steel inserts and are nearly identical in construction and operation. They are reliable, horse tamper proof and easy to install. They allow both horizontal and vertical adjustment and can be adjusted anytime during or after installation. Their two-way operation makes it easy to throw the gate closed from either direction while on your horse. Using a Buckley Latch or an EZLatch will ensure your gate post does not lean over time. The latch designs allow the latch pin to rest on the latch plate when the gate is closed, alleviating the weight on the gate post.

The Buckley Latch fits a 2 3/8" pipe style fence only. Its shorter height makes it a good fit on pipe style fences with 4 or more rails.

The EZLatch fits a wider range of fence types including our Steel Board and Alumashield Fences and any other vinyl, wood or pipe style fence. It includes provision to use a standard pad lock and a convenient loop to hang the lock when not in use.
