Introductions and Improvements For You & Your Customers

hoses, preventing wear. Other enhancements include an increase of the tractive effort of M-Series loaders by 15 to 20 percent to provide exceptional pushing and digging power; holes for frame-mounted counterweights that increase lifting performance with certain attachments; and a larger fuel capacity that allows the loader to work longer between fueling. The new design also makes it easier to clean out the cooling system. Maintenance has been simplified with a new hydraulic sight gauge. Superior visibility is provided to the cutting edge of a bucket or the corners of an attachment because the cab door is the largest available on the market. Bobcat increased the size of the cab by 10 percent, redesigned the interior to allow operators to adjust the environment to their individual preference and improved cab pressurization. Bobcat has reduced the sound level of M-Series loaders by more than 60 percent. New engine mounts improve isolation to decrease vibration and reduce sound levels.

Steel board fence

Buckley Fence has designed the perfect fence system for the horse, ranch, farm or home. The Steel Board Fence is the first classically designed post and rail panel fence made of steel that is designed to last decades with very little maintenance. Offered in a richly textured black finish and glossy white and in 3 or 4 rail configurations, the fence exudes strength and beauty with elegant 10 foot rails and matching gates and latches. Galvanized on both the inside and exterior of each rail and post and powder coated with architectural grade powder coating in combination with a zinc phosphate conversion coating, the fence components' resistance to rust and color retention are superior. The fence posts are fitted with unique patented rubber grommets and lock spacers. The rubber grommets protect the rail's surface from scratching, add flex and allow the rails to be easily articulated within each post to fit any terrain or layout. The patented lock spacers in each post lock the

rails in place and eliminate the need for nails or screws. "These unique features not only simplify installation, they make the fence remarkably safe for horses or livestock," says Jim Buckley, the owner and inventor. "The rubber grommets enable the rails to flex upon impact and will safely and securely contain the animal, while the absence of nails or screws ensures a smooth surface at all times." Unlike wood and vinyl, the Steel Board Fence will never warp, sag, splinter or mold. It will retain its color, crisp straight lines and well-maintained appearance for decades. The matching

Steel Board Gate comes equipped with a unique patented leveling system built right into the polymer bearing system in the gate posts to ensure a perfectly level gate. The gate comes in four different sizes—4, 6, 8 and 12 feet, and in 3 or 4 rail versions. The matching latch, EZLatch, is made of corrosion resistant aluminum alloy and stainless steel. Its two way operation is horse tamper proof. Both the gate and latch can be used with any existing fence.

Assuragate never needs adjusting

Gate-In-A-Box Inc is now making available the new patent pending Assuragate, called that because it provides the assurance of a gate that will last for many years. The unique, overlapped frame construction prevents the gate from shrinking and sagging, while the "A" frame provides the durability and support needed. Daily wear and tear can cause problems with normal gates, but not with the Assuragate. Many contractors spend time and money repairing previously installed gates due to the shrinking that occurs in the wood over time. This shrinking causes the gate to sag and no longer latch properly. Assuragate is the first of its kind. The gate frame alone is strong enough to hold over 250 pounds. The creator behind Assuragate is the owner of North American Fence and Supply Company, Steve Bloom. Steve has been in the fencing industry for almost 30 years and has dealt with the problems and costly repairs associated with malfunctioning gates. "I knew there had to be a way to build gates that would stand up better to time and weather" Steve said. After years working with engineers, he found the solution. Assuragate comes in many styles and can be customized to your specifications or made to match an existing gate. It can also be built to accommodate uneven terrain as well. Typically constructed with western red cedar, the gate can be made with other types of wood by request. This gate-in-a-box is easy to assemble and comes with the necessary hardware.

Unleash the Beast
Rhino Air Driven Post Drivers

Our Models Can Drive:

- Copper, aluminum, vinyl, plastic, wood, steel, iron, etc.
- Groundrod, corner posts, line posts, anchors, stakes, pins, pilings, deck supports, sheet pile
- Post sizes from 0.75 inches to 16 inches

Unlike Hydraulic Drivers, Our Units:

- Only have one moving part
- Are virtually maintenance-free
- Can easily last 15 to 20 years
- Do not generate heat
- Do not require heavy hydraulic hose
- Offer a higher Return on Investment

PD-55 Post Driver
