

## Buckley designs first aluminum pipe style post and rail fence

MILWAUKEE, Wis. — Buckley Fence says it has designed the first pipe style post and rail fence made of aluminum, intended for use on ranches, farms or residences.

Named the Alumashield Fence, its design makes it more flexible than steel pipe for improved horse safety, and completely corrosion resistant. Offered in a glossy white or black finish and in 2, 3, 4, or 5 rail configurations, the fence is strong and elegant with 10 foot rails and matching gates and latches, the company said.

It is constructed of powder coated aluminum tubing reinforced by a high strength cold rolled steel tubing core sealed at each end. "This composite construction gives the fence greater flex and strength," said Jim Buckley, owner and inventor. "The rail connec-

tors are also made of aluminum and their sleek, patented design give the fence a clean, smooth look."

The rail connectors are fastened with a single set screw made of forged aluminum. The connectors and each set screw are fitted with unique rubber grommets that protect the powder coated surface of the rails from scratching during installation.

The Alumashield Fence is resistant to the damage caused by

fluctuating temperatures, Buckley added. Each fence section is thermally independent and will accommodate the slight expansion and contraction caused by changing temperatures. The fence components will not warp, sag, or bow. Nor will they mold, splinter or incur insect damage.

"This fence is also very easy to install," he said. "Once the posts are set correctly, the rail connectors simply slip on the posts and rails and are fastened at each intersection with the quick turn of just one set screw.

The matching Alumashield Gates come equipped with a patented leveling system built right into the polymer bearing system within the gate posts to ensure a perfectly level gate every time.

Offered in the same glossy white or black finish, the gate comes in four different sizes — 4, 6, 8 and 12 feet, and in 3 or 4 rail versions.

The matching Buckley Latch is made of corrosion resistant aluminum alloy and stainless steel. Its two-way operation is horse tamper proof. Both the gate and latch can be used with any existing pipe style fence.
