standard in equine fencing

STEEL BOARD FENCE

The Steel Board Fence system with matching Steel Board Gates is truly in a class by itself. Designed in the traditional "board" style look, the fence components are not made of wood or vinyl, but rather steel - cold-rolled, two-side galvanized steel finished with an architectural grade powder coating! The Steel Board Gates add the finishing touch and lend to the beautifully straight and continuously flowing fence line.

Horse owners looking to invest in a fencing solution done right finally have an environmentally friendly option that is strong, safe, maintenance free and aesthetically pleasing.

The outstanding features of the Steel Board Fence include:

- **Beauty.** Elegant ten foot post centers, perfectly straight rails and posts, rich architectural-grade powder coat, and perfectly matching gates.
- **Maintenance Free.** The powder coat finish is durable, water resistant, impact resistant and UV resistant. No painting required. No warped, broken or sagging rails. No rotting posts.
- **Strength and Durability.** The dimensions and geometry of the steel posts and rails give them considerable strength and flex (or "give") to protect the horse upon impact. Properly treated to resist corrosion, the galvanized powder coated steel will last 25 plus years and easily more depending on environmental conditions.
- **Thoroughly Engineered and Designed.** The steel posts have rail openings lined with patented rubber grommets to protect the steel rails. Inside each steel post is a patented lock spacer that holds the rails in place, eliminating the need for nails, screws or fasteners. The steel rails are easily articulated within the post opening allowing the fence line to follow the terrain of the land. Installation is simple for the installer or the do-it-yourselfer.
- **Horse Safe.** The highly visible posts and rails have smooth, rounded edges and no fasteners or nails. While the steel gives the fence tremendous strength, the long rails and rubber grommets enable the rails to flex and not break. The horse will be cushioned upon impact and not injured.
- **Eco-Friendly.** Steel is a very sustainable exterior material and is the most commonly recycled material. The Steel Board Fence is made primarily of recycled steel and is 100% recyclable. The powder coat finish is non-toxic, free of volatile organic compounds or chemical-based solvents.

The Steel Board Fence comes in three (3) and four (4) rail configurations and in a glossy white or richly textured black finish. See the reverse side for information on the matching Steel Board Gate and EZLatch.

STEEL BOARD GATE

The Steel Board Gate is a perfect match to the Steel Board Fence having the same height and rail dimensions. When installed with the Steel Board Fence, it blends beautifully to create a continuously flowing fence line that is strong and safe.

Made with the same galvanized powder coated steel as the Steel Board Fence, the gate's unique design features include the following:

- **Hinge-less Design.** The gate rests on top of the separate gate post on a built-in dual bearing system inside the post-end of the gate. The gate post engages the upper bearing assembly inside the gate which allows the gate to open and close easily and quietly.
- **Leveling Mechanism.** After the gate is placed on the gate post and engages the upper internal bearing, the gate is leveled by rotating the lower bearing. When the gate is level, the bearing lock screw is tightened and the gate is kept perfectly level.

The Steel Board Gates are sold separately and come in three different sizes: 4 foot, 8 foot and 12 foot. The gates can be installed individually or as doubles to maximize the gate opening area. The colors offered are either textured black or glossy white. The rail configurations available include 3-rail and 4-rail only. The Steel Board Gate is also compatible with any wood or vinyl fence.

Double Gate with Ground Anchors

Single Gate with EZ Latch

GATE LATCHES

The Steel Board Gate is held securely closed with our EZ Latch gate latch assembly (sold separately). This "horse proof" latch will prevent even the most curious horse intent on escaping. It's unique design features include:

- **Two-Way Operation.** Makes it easy to open and throw the gate closed from either direction while on your horse.
- **Prevents Gate Lean.** Latch pin rests on the latch plate when the gate is closed, alleviating the weight on the gate post.
- **Corrosion-Free.** Made of aluminum alloy with stainless steel inserts.
- **Fully Adjustable.** Horizontal and vertical adjustments can be made anytime during or after installation.

The EZ Latch fits a wide range of fence types including our Steel Board Fence and any other vinyl, wood or pipe style fence. It includes provision to use a standard pad lock and a convenient loop to hang the lock when not in use.

FROM THE PRESIDENT & FOUNDER

We continue to develop solutions at Buckley Fence, LLC that complement and enhance fencing systems. And invite you to contact us to see what Buckley Fence, LLC can do for your project.
